User(user_id, date_created, password, first_name, last_name, date_of_birth, ethnicity)

Monetized_Post(post_id, money_made)

Post(post_id, user_id)

Comment(comment_id, message, user_id, post_id)

Story(story_id, user_id, interaction_count)

Monetized_User(user_id)

Normal_User(user_id)

Company(user_id, company_name)

Follows(user_id1, user_id2, date_followed)

User:

R1: user_id -> date_created, password, first_name, last_name, date_of_birth, ethnicity

R2: monetized_post_id -> money_made, user_id

R3: unmonetized_post_id -> user_id

R4: comment_id -> message, user_id, post_id

R5: story_id -> user_id, interaction_count

R6: user_id -> total_money_made

R8: company_user_id -> company_name

R6, R7, and R9 do not have any functional dependencies as they are only primary keys. This is in BCNF.
